

ABSTRACT

A method for forming a seal pattern of an LCD device includes a division mask to print seal patterns onto a substrate. A substrate having a plurality of liquid crystal display panels is prepared; a mask having an opening is arranged on at least one liquid crystal display panel; a seal pattern is formed on the liquid crystal display panel corresponding to the opening with the mask; and the mask is re-arranged on another liquid crystal display panel to form a seal pattern on a corresponding liquid crystal display panel.
